EDUCATION

NATIONAL TAIPEI UNIVERSITY OF TECHNOLOGY

- Master's degree, Information Security · GPA 3.82 · (2025 - 2027)
- Bachelor's degree, Information and Finance Management · (2020 - 2024)

SKILLS

- ROS2 / C++ / Python
- Isaac Sim / Lab / Mimic
- LeRobot / Robot Learning
- FastAPI / Next.js / Docker

CERTS & AWARDS

- AWS Certified SAA
- AWS Certified CCP
- iPAS AI Application Planner
- General Manager's Award, TWM Kepler Innovation Comp
- Champion, AI FinTech Comp

LANGUAGES

- Chinese (Native)
- English (Fluent)
- Spanish (Intermediate)

陳一中 CHEN YI ZHONG

PROFILE

M.S. Candidate at NTUT, specializing in Robotics & Physical AI. Currently researching Digital Twins and Robot Learning using NVIDIA Isaac Sim/Lab. I work on hardware-software integrated systems, including training and deploying low-power NPU image recognition models, with projects showcased at Embedded World 2025 and Computex 2025.

I use and am beginning to contribute to the open robotics data project Mosaico, while exploring robot learning tools such as LeRobot and building experience across the sim-to-real robotics pipeline.

Starting from software and full-stack development (Next.js, FastAPI) with AWS EC2 containerized deployments, I aim to grow into a versatile engineer and eventually become a Digital Twin Engineer, bridging simulation and real-world robotics.

WORK EXPERIENCE

Brinno

2024 - PRESENT

Full Stack Developer (Intern)

1. Edge AI Integration: Led the integration of low-power NPU image recognition models into commercial applications, coordinating model training, optimization, and on-device deployment.
2. System Development: Served as technical PM while Developed FastAPI backends and Next.js frontends for AI application and device communication and docker containerization,
3. Global Exhibitions: Led system implementation for products showcased at Embedded World (2025/2026), Computex 2025, and IBC 2025 Amsterdam.

Taiwan Mobile

2023 - 2024

Proof of Concept Engineer (Intern)

1. Award-Winning Performance: Received the Monthly Honor Award for outstanding performance.
2. AI Research & Innovation: Participated in Dynamic Gaussian Splatting research; team won the General Manager's Bonus Award in the Kepler Innovation Competition.
3. System Development: Built an Intelligent Source Code System using RAG technology, including a code chatbot and onboarding tutorials.
4. Automation & Optimization: Maintained the RPA recruitment system using Power Automate to ensure stable operations.
5. Technical Leadership: Shared RAG technology as a speaker at a COE technical session for over 160 colleagues.

Quality Assurance Automation Engineer (Intern)

1. Built a development automated testing framework from scratch based on the Page Object Pattern, effectively improving testing efficiency and coverage and significantly reducing manual testing workload.
2. Refactored Stickers and Store Modules in the M+ app which was developed by Taiwan Mobile
